

Lakshay Manglani

Jaipur, Rajasthan, India

Full-Stack Developer

lakshaymanglani2212@gmail.com · lakshaymanglani.com

linkedin.com/in/lakshay-manglani · github.com/LakshayManglani

Full-stack developer specializing in **Vue and Nuxt**, with production experience in **React, Node.js, and Fastify**. I design and build complete systems: editors, APIs, and the servers they run on. I also self-host production infrastructure on my own bare-metal Linux server, from reverse proxy and SSL to containerized deployments.

PROJECTS

Bicar Visual Editor, Full Stack

Client work

- Evaluated block-editor frameworks, then designed and built a custom Slate-based visual editor and its API from scratch
- One editor renders both the live site and the live edit view: a single read-only flag switches between them, so there's no separate template to keep in sync
- Directed its reuse and extension for a second client (Kathika) rather than rebuilding from zero

React · Slate · Node.js · MongoDB

Gems E-Commerce Platform

Personal / in progress

- Gemstone marketplace with variety/weight/shape/clarity/price filtering, live at gems.lakshaymanglani.com
- Built a Rust query service that serves the catalog from an in-memory cache, reaching ~650x the throughput of hitting Postgres directly under the same load (15k req/s at 6ms median)
- Self-hosted on my own hardware: Nuxt frontend, Rust query service, and Fastify order service, running behind Nginx via Docker Compose

Rust · Nuxt · Fastify · Docker · Nginx

Server Template Backend Infrastructure

Personal project

- Production-shaped Fastify + TypeScript template: schema-driven validation, centralized error handling, CI
- Test suite runs the real app in-process via Fastify's inject(), with no live server or mocked database required

Fastify · TypeScript · Prisma · PostgreSQL · Docker

EXPERIENCE

Freelance Full-Stack Developer

Dec 2024 – Present

- Delivered client projects across CMS platforms, admin panels, and production-ready web apps
- Built 2 custom CMS platforms with in-place visual editing for non-technical users
- Designed and developed 40+ responsive UI screens for a commercial B2B product

Backend Developer Intern at TrackOnWeb

Dec 2023 – Feb 2024

- Designed REST APIs for product catalog, cart, recently-viewed, and review systems on a multi-vendor e-commerce platform
- Improved API response time by ~50% using Redis caching; implemented robust error handling

SKILLS

Frontend

Vue, Nuxt, React, TypeScript

Backend

Node.js, Express, Fastify, Rust

Database

PostgreSQL, MongoDB, Redis

Infrastructure

Docker, Nginx, Linux (bare-metal self-hosting), CI/CD

EDUCATION

Bachelor of Computer Applications

2022 – 2025

NOW

Open to full-stack roles: Vue/Nuxt on the frontend, backend and systems design at heart. Remote-first.
